

1. 두수 비교하기

```
import java.util.Scanner;
```

```
public class Main {
```

```
    public static void main(String[] args) {  
        Scanner s = new Scanner(System.in);  
        int A= s.nextInt();  
        int B= s.nextInt();  
  
        if (A < B) {  
            System.out.println("<");  
        }  
        else if (A > B) {  
            System.out.println(">");  
        }  
        else {  
            System.out.println("==");  
        }  
    }  
}
```

2. 시험성적

```
import java.util.Scanner;
```

```
public class Main {
```

```
    public static void main(String[] args) {  
        Scanner s = new Scanner(System.in);  
        int A = s.nextInt();  
  
        if (90 <= A && A <= 100) {  
            System.out.println("A");  
        }  
        else if (80 <= A && A <= 89) {  
            System.out.println("B");  
        }  
        else if (70 <= A && A <= 79) {  
            System.out.println("C");  
        }  
    }  
}
```

```

        else if (60 <= A && A <= 69) {
            System.out.println("D");
        }
        else {
            System.out.println("F");
        }
    }
}

```

3. 합

```
import java.util.Scanner;
```

```
public class Main {
```

```

    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int N = s.nextInt();
        int De = 1;
        int Sa = 1;
        while (true) {
            if (De == N) {
                System.out.println(Sa);
                break;
            }
            De ++;
            Sa += De;
        }
    }
}

```

```
}
```

4. 구구단

```
import java.util.Scanner;
```

```
public class Main {
```

```

    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int num = s.nextInt();
    }
}

```

```

        for(int i = 1; i<10; i++) {
            System.out.println(num + " * " + i + " = " + num*i);
        }

    }

}

```

5. N찍기

```
import java.util.Scanner;
```

```

public class Main {

    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int num = s.nextInt();
        int De = 1;
        while (true) {
            if(num == De) {
                System.out.println(De);
                break;
            }
            System.out.println(De);
            De++;
        }

    }

}

```

6. 기찍N

```
import java.util.Scanner;
```

```

public class Main {

    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int num = s.nextInt();
        while (true) {
            if(num == 1) {
                System.out.println(num);
            }
        }
    }
}

```

```

                break;
            }
            System.out.println(num);
            num--;
        }
    }
}

```

7. A+B - 3

```
import java.util.Scanner;
```

```
public class Main {
```

```

    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int A = s.nextInt();
        for(int i = 0; i<A;i++) {
            int a = s.nextInt();
            int b = s.nextInt();
            System.out.println(a+b);
        }
    }
}

```

```
}
```

8. 윤년

```
import java.util.Scanner;
```

```
public class Main {
```

```

    public static void main(String[] args) {
        Scanner s = new Scanner(System.in);
        int year = s.nextInt();

        if(year%4==0) {
            if(year%400==0) {
                System.out.println("1");
            }
            else if(year%100==0) {
                System.out.println("0");
            }
        }
    }
}

```

```
        }  
        else {  
            System.out.println("1");  
        }  
    }  
    else {  
        System.out.println("0");  
    }  
}  
  
}
```
