

별 찍기

```
import java.util.Scanner;

public class Main {

    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int star = scanner.nextInt();

        for(int i = 1; i <= star; i++) {

            for(int j = i; j < star; j++) {
                System.out.print(" ");
            }

            for(int k = 0; k < i*2-1; k++) {
                System.out.print("*");
            }
            System.out.println();
        }
    }
}
```

최소, 최대

```
import java.util.Scanner;

public class Main {

    public static void main(String[] args) {
        Scanner in = new Scanner(System.in);
        //
        int N = in.nextInt();
        int[] arr = new int[N];
        //
        for (int i = 0; i < N; i++) {
            arr[i] = in.nextInt();
        }
        //
        Arrays.sort(arr);
    }
}
```

```
        System.out.print(arr[0] + " " + arr[N - 1]);  
    }  
}
```
